
TOURNIQUETS & HAEMOSTATIC DRESSINGS

Did you know that the European Resuscitation Council (ERC) First Aid Guidelines 2015 state that when direct pressure cannot control severe bleeding, haemostatic dressings and tourniquets are to be used?

Following extensive use and research in combat, there is a wealth of evidence that tourniquets are effective, save lives and have a relatively low rate of complications following application.

Similarly, haemostatic dressings have also undergone significant improvements in recent years, have low complication rates and have saved many lives.

The balance of complications versus possible outcomes if not used have led to both tourniquets and haemostatic dressings being introduced into main-stream first aid.

Of course, a small office workplace is unlikely to find that catastrophic bleeding is a significant risk to their employees, so they wouldn't necessarily have to rush out and buy this new equipment. A waste recycling plant or tree surgeon on the other hand may wish to consider having these available.

TOURNIQUETS

C-A-T Tourniquets - £26.00 + vat

The C-A-T® is a small and lightweight (59 grams) one-handed tourniquet that completely occludes arterial blood flow in an extremity.

The C-A-T® uses a Self-Adhering Band and a Friction Adaptor Buckle to fit a wide range of extremities, combined with a one-handed windlass system. The windlass uses a free moving internal band to provide true circumferential pressure to an extremity. The windlass is then locked in place; this requires only one hand, with the Windlass Clip™.

The C-A-T® also has a Hook-and-Loop Windlass Strap™ for further securing of the windlass during patient transport.

Also available in Orange.

HAEMOSTATIC DRESSINGS

Haemostatic Guaze - £45.00 + vat

Celox™ Rapid Haemostatic Gauze is a dressing designed to control major haemorrhage, including life-threatening bleeding from arterial injuries, in just 60 seconds - the fastest acting Haemostatic Gauze treatment currently available!

It uses the powerful Celox citosan granules laminated on to a dense Z-Fold gauze, so it is quickly and easily packed into bleeding wounds. It is individually sterile packed in a ruggedized pouch with tear notches for fast opening.

The key users of CELOX RAPID are professionals exposed to situations where traumatic blood loss can occur, including Military, special forces, tactical units, law enforcement, first responders and emergency services personnel.

Dimensions: 7.5 x 152cm

Haemostatic Granules - £17.00 + vat

CELOX is the newest generation of emergency haemostatic agents.

Simple to use, CELOX granules quickly control even the most severe arterial bleeding. Just pour it in, pack it, and apply pressure.

CELOX is not exothermic and will not burn the victim or caregiver.

CELOX works in hypothermic conditions and clots blood containing anti-coagulants. CELOX is safe to use for the entire body including head, neck and chest wounds.

Most importantly, CELOX can be used instantly and without hesitation as a fast, safe and simple emergency treatment for serious bleeding.

- Works independently of normal blood clotting factors
- Simple and safe to use
- Not Exothermic; will not burn the victim or caregiver
- Works in hypothermic conditions and clots Heparinised blood
- Safe to use for the entire body including, head, neck and chest wounds
